CENTRAL CALIFORNIA NURSERYMEN'S ASSOCIATION
AMERICAN HORTICULTURAL SOCIETY
CALIFORNIA HORTICULTURAL SOCIETY
ROYAL HORTICULTURAL SOCIETY (OF ENGLAND)

NEW ITEMS

During the last 10 or 12 years we have doubtless imported the greatest assortment of new and rare woody plants brought into the country during that period.

Also we have been working pretty hard at plant breeding with rather encouraging results.

As rapidly as possible we are dropping all common lines and concentrating on novelties and specialties. These are the things that are in demand nowadays.

Hence this list is well worth very careful study if you take interest in trees and shrubs which are out of the ordinary.

Several novelties either imported or originated by ourselves are now being introduced on an exclusive basis by certain first-class retail catalog houses who wish "leaders" of high quality. We have more of these items coming along and shall be glad to explain the arrangement on request.

EXPLANATION OF HARDINESS RATINGS

As this list goes all over the U.S.A. (and abroad in peaceful times), we believe it a good idea to indicate hardiness. This has been done by giving after the name of each item a number in () indicating the zone up to which it is considered hardy.

Our authority through Zone 7 is Rehder's Handbook. For Zones 8 to 10 we have been guided by Pacific Coast experience and have sub-divided Zone 9 so that

(9) indicates probably safe to 20° (Sacramento and San Joaquin Valleys, etc.).

(9½) indicates probably safe to 25° or 26° (San Francisco Bay Region, etc.).

(10) indicates will stand only very light frost.

To find the zone you are in refer to map on center pages of this book, which we use by the courtesy of Arnold Arboretum and McGraw-Hill Book Co.

Please understand that all ratings show our honest opinion, but we disclaim all responsibility for their correctness.

We hope this innovation will be helpful to nurserymen all over the country.

ABBREVIATIONS—

A. M. R. H. S.—Given an Award of Merit by Royal Horticultural Society of England.

F. C. C. R. H. S. indicates their First Class Certificate, which is a distinction rarely conferred.

A. M. C. H. S.—Given an Award of Merit by California Horticultural Society.

Gal.—Gallon can. (Also see below.)

LINING OUT STOCK—

For convenience, this is assembled on pages 39 and 40. The list comprises mainly new and uncommon items, so deserves careful scrutiny.

POT GROWN AND GALLON CAN STOCK—

We find that many customers, especially those at a distance, prefer to have us remove soil and ship "bare roots" packed in moss. Wherever possible, this should be done this season on account of great scarcity of labor, shortage of packing boxes, etc. So if you order this class of material please be sure to say whether you want it packed with or without soil on the roots.

California nurserymen will please note that 4-in. pot stock in body of list can be transferred at once to gallon cans for immediate sale, while the smaller sizes for growing on, together with 2½ and 3-in. pot stock, will be found at end of list.

Conifers

Unless otherwise stated all plants in this section will be balled at prices quoted.

For "growing on" sizes see end of price list.

CORREA harrisi (new)

Red Australian Fuchsia (8-9)

It is with great pride that we are finally able to offer this magnificent plant to the nursery trade for the first time and exclusively in this country. Learning that it was esteemed in England as the finest of the Correas, we imported it four successive years, but like all others we failed to save a single plant. We finally rooted 7 cuttings and have built up our stock from them.

Flowers are solid red, larger than those of *C. pulchella*, and borne profusely during fall and winter, even on small plants which bloom continuously from November to April. The shrub has an excellent branching habit, is attractive at any season and thrives in sun or shade, requiring no particular type of soil. It is a retailer's delight as it is in full bloom during the height of the season and "sells itself." Granted an Award of Merit by the California Horticultural Society. All plants offered will carry flower buds, regardless of size.

DAPHNE SOMERSET

(Plant Patent 315)

Here this splendid hybrid is evergreen and of vigorous, rather erect growth. Main crop in spring when ends of shoots are completely surrounded with long-tubed deliciously fragrant flowers which are pink in bud, open white and become rosy pink before they drop. Also has a moderate crop in fall and early winter. A grand novelty. A.M.R.H.S.

yunnanensis (new) (7)			
This beautiful and interesting evergreen Holly offers great possibilities both for garden and pot-plant use. It might be briefly described as an Ilex crenata with red berries! Leaves are very small and habit compact. The small flowers, curiously enough, are pink. In open ground it may reach 8 or 10 ft. but for pot use it can be "pinched" to size desired. Plants offered are grafted so will berry young.

HARDI NESS MAP

HOW TO USE THIS MAP

From it determine what zone you are in. Every item carrying your zone number **or a smaller number** should be hardy with you. If you want to gamble on those rated **one zone greater**, there is at least a chance for success, but two zones greater will probably be hopeless.

For full explanation of the entire system see inside of the front cover.

Deciduous Trees

Unless otherwise stated, all plants in this section will be dug "bare roots."

DECIDUOUS TREES

FRAXINUS griffithi (new)

GRIFFITH ASH (7)

Remarkably beautiful tree of rather slow growth. Has numerous small leaflets of uniform size which are leathery, deep green and very glossy. It looks like an evergreen and holds its foliage until very late in the fall but is entirely deciduous. In addition to all this it belongs to the "Flowering Ash" group so has large clusters of white fragrant flowers. Altogether quite a tree!

Lilacs

(Syringa) (3)

All our Lilacs are budded on Privet. They should be planted about 4 inches deeper than they stood in nursery row which will put them "on own roots" the first season. All plants, regardless of size, are branched.

Demand was so great last season that after booking up advance orders our assortment was very limited. **The situation is even worse this year.** Under the circumstances, we certainly recommend early ordering if you wish to get stock of any of the varieties still unsold, several of which are not available elsewhere in the country.

Numbered varieties have been bred here but not yet fully tested. Our present opinion of their quality can be judged from the group in which each is placed.

We heartily recommend the booklet, "Lilacs for America," which contains a wealth of information including quality ratings on all varieties. It can be had by sending \$1.00 to A. H. Scott Horticultural Foundation, Swarthmore College, Swarthmore, Penn.

LILAC SHOW

will be held as usual in April, 1944, but whether at the nursery or in San Francisco has not yet been decided. Due notice will be given.

Magnolias

Although we propagate grafted Oriental Magnolias very heavily, it takes a long time to get them up to salable size. Last year's sales were so great that we were almost entirely cleaned out, and as none of the new stock is large enough to sell, we list almost nothing. However, some of the sting is taken out of this by our being able to offer to the trade for the first time in this country the glorious Magnolia cambelli.

Campbelli (7)

This grand Magnolia from the foothills of the Himalayas has been celebrated in horticultural literature for many decades, but owing to difficulty of propagation there have been only a few trees in the U. S. A. and none of these had been known to flower until the specimen in Golden Gate Park, San Francisco, bloomed in the spring of 1940. The flowers are pink and may range anywhere from 8 to 14 inches wide. It prefers cool, moist conditions, and here anyway does not like full sun when young. All plants offered are grafted on seedling roots.

We have some colored halftone plates (made in England, postcard size) of the flowers and will send one on request.

Flowering Quinces

(CHAENOMELES, formerly Cydonia)

All stock is grafted; mainly on Angers Quince.

Without seeing them, anyone can hardly realize how great an improvement has been made in the Flowering Quinces by the 10 or 12 years' work that we have given to breeding them. One good indication is the fact that we have stopped propagating almost all the older sorts as the newer ones are so far superior.

Incidentally, we are open to make exclusive arrangements for the territory east of the Rockies on some of our new originations in this group. If interested please write for particulars.

CATHAYENSIS HYBRIDS (5-6)

These are a new and distinct hybrid species obtained in our nursery by crossing *C. superba corallina* with *C. cathayensis*. The plants are vigorous growers, make short laterals freely and are heavy bloomers. Some are extremely early commencing to bloom in December and January here. All have a second crop and some a third.

This hybrid group was granted an Award of Merit by the California Horticultural Society in 1939. We are now very proud to report that the same distinction was given it by the **Royal Horticultural Society of England** last spring. It was conferred specifically on the variety *Enchantress*.

Enchantress—BDE. Large bicolored pink. A.M.R.H.S.

Fire—CDE. This is possibly the finest red in this group of hybrids and is now offered to the trade for the first time. The color is very brilliant; the petals overlap, making a large, full flower; the plant is vigorous and productive. It starts to bloom early in the season and has three successive crops which here keep it flowering steadily from early January till late March. This is the particular variety that was given the A.M.C.H.S.

Masterpiece—ACD. Rosy-scarlet.

Mt. Everest—BCD. White.

Pink Beauty—CD. Pink.

Rosemary—CDE. Deep rose.

Sunset Glow—BCDE. Red to dark rose.

#317—B. Deep rose, medium early.

Kermesina semi-plena—C. Pink to red.

Nivalis—BCD. White.

Rose Pink—A.

Rubra grandiflora (Blood Red)—BCE.

C. SUPERBA GROUP (4)

Hybrids (*lagenaria* x *japonica*) of medium height and growth; fruit of medium size.

Latest Introduction

CORAL SEA—This has a most charming color which might be called buff coral. To be more exact, the inside of the blossom, which runs up to about 1¾ inches diameter, is softest Chinese Coral, H.C.C. 614/1, at the base, gradually deepening to soft Mandarin Red, H.C.C. 17/2, at the very tips. (H.C.C. means the new Horticultural Color Chart.) Like all superbas, the growth is moderate with rather small leathery leaves. It is an extremely profuse bloomer, so much so that it should be fine for cutting. The seedling first bloomed in spring, 1941, so we have had three years to observe it with the result that the more we see it the better we like it.

At present this variety is for sale generally east of the Rockies, but we are open to make an exclusive arrangement with some distributor for that territory. It is **not for sale on the Pacific Coast** as exclusive arrangements for that region have already been made.

Contorta—C. White to pink; branches twisted.

Early Appleblossom—CD. Profuse. Flowers are of medium size and come in great profusion, showing a pleasing blend of light and dark pink.

Early Orange—BCD. While this is fairly well described by its name, we can add that it is an unusually profuse bloomer, easily the most so of the early varieties. Stays in bloom for several weeks.

Juliet—BCDE. Soft coral pink, charming color; free blooming; very early with a later second crop.

Stanford Red—BCDE. Rich red. Flowers very large, opening flat and up to 2 inches diameter. Geranium lake deepening to an intensely vivid rich red. Blooms profusely over a very long season.

#309—DE. Improved Corallina.

#319—A—C. Coral shaded greenish-yellow.

#333—A—C. Coral, lighter center.

#337—CDE. Orange scarlet, huge flowers.

#344—DE. Shrimp pink or orange-scarlet.

VIBURNUM

10
rate 100
rate

We believe that the remarkably fine new oriental Viburnums are going to make a great hit with the gardening public. Many of them bear brilliant red berries in great profusion, and now that Cotton-easters and Pyracanthas have become so common the gardening public is sure to want something different. These will certainly "fill the bill." Some that do not bear red berries are among the most beautiful and striking flowering deciduous shrubs with a further advantage that quite a few are intensely fragrant.

betulifolium (new)

BIRCHLEAF VIBURNUM (5)

Vigorous large shrub bearing masses of red berries.

6	to 7	ft.	2.50	
3	to 4	ft.	1.25	
2	to 3	ft.	.85	.75
1½	to 2	ft.	.60	.50
gal. 3	to 4	ft.	.75	
4 in. pot 2	to 3	ft.	.60	.50
4 in. pot 1	to 1½	ft.	.35	.30

carlesi

KOREANSPICE VIBURNUM (4)

1½	to 2	ft.	1.10	1.00
1	to 1½	ft.	.90	.85
4 in. pot 6	to 8	in.	.35	.30

dilatatum (new)

LINDEN VIBURNUM (5)

Rounded shrub bearing clusters up to 6 inches wide of white flowers followed by bright red long-lasting berries. Excellent.

2	to 3	ft.	.85	
---	------	-----	-----	--

erubescens (new) (5)

Even for foliage alone this is a remarkably handsome shrub. Leaves are large and lustrous with red stalks. The faintly fragrant white flowers are borne freely in long racemes or drooping panicles and are followed by berries, at first red and finally becoming black. It looks very good to us.

2½	to 3	ft. heavy	1.50	1.35
1½	to 2	ft.	1.10	1.00
4 in. pot 1	to 1½	ft.	.60	.50

fragrans (new) (5)

Small shrub of rather slow growth bearing superbly beautiful clusters of pink, intensely fragrant flowers in late fall or early spring. Sometimes blooms in winter. Very scarce.

ballad 1	to 1½	ft.	1.00	
5 in. pot 12	to 15	in.	.75	.60
5 in. pot 8	to 12	in.	.60	.50

DECIDUOUS SHRUBS

VIBURNUM (continued)

fragrans candidissimum (5)

Same as preceding except flowers are white and foliage lighter green.

GRAFTED WISTERIAS

(VINE FORM)

For many years we have been widely known as Wisteria specialists. In spite of steadily increasing our production we never seem to have enough and this year the situation is worse than ever, advance sales having entirely cleaned up a good many kinds, which accounts for the very limited assortment of varieties and sizes offered below.

NEW AND SPECIAL GROUP

A 5 yr.	2.50	2.00
B 4 yr.	2.00	1.65
C 3 yr.	1.25	1.00
D 2 yr.85	.75

Letters after varieties show sizes available.

floribunda Issai (4) AB. Blue-purple; very profuse and precocious.

formosa (4-5) AB. Hybrid (sinensis x floribunda). Pale violet.

GENERAL COLLECTION

A 5 yr.	2.50	2.00
B 4 yr.	1.50	1.35
C 3 yr.	1.00	.85
D 2 yr.75	.60

Letters after varieties show sizes available.

floribunda (4) BC, light purple.

floribunda alba (4) AB, white.

floribunda carnea (4) AB, flesh.

floribunda Geisha (4) C, blue.

sinensis (5) B, lavender.

venusta alba (5) BCD, white.

Bird's IMPROVED NEPONSET Flower Pots

We are agents for Bird & Son's famous Neponset Paper Pots. The green pots, now greatly improved, are used for growing. The red pots are used for shipping.

We sell only in unbroken case lots. Prices on green pots are at factory in Massachusetts.

Prices on red pots include freight to any point on the Pacific Coast if ordered for shipment direct from the factory; otherwise, f.o.b. San Jose. On orders from other parts of the country a credit will be allowed for difference in freight.

Size	Quantity per case	Price per 1000	
		Green	Red
2 inch	1000	\$ 6.50	\$ 4.20
2½ inch	1000	7.10	5.00
3 inch	1000	8.40	6.40
4 inch	500	12.50	10.00
5 inch	500	17.50	14.00
6 inch	500	23.00	18.00

Special rates on request for unusually large quantities.

PLEASE NOTE

All summer prices and other quotations not accepted to date are hereby cancelled.

Prices. All prices herein are strictly net, to the trade only and for goods at our nursery unless otherwise stated. This list means what it says both as to prices and terms, and we do not deviate from it.

Pots. Prices of pot-grown stock do not include the clay pots and unless otherwise instructed, plants will be shipped without them. If wanted in the pots, they will be charged for at cost, but may be returned and full credit will be given.

Specimens. Prices herein are for average good plants but selected specimens will be charged for extra at actual value.

Terms. To buyers of known or established credit, 60 days net from date of invoice. Otherwise cash with order or 25% with order, balance C. O. D. No "cash discount" except as stated under "Packing" below.

Quantities. Five or more plants of one kind and size will be supplied at 10 rate; 25 or more at 100 rate; for less than 5 of one kind and size add 20% to 10 rate unless it is \$1.50 or more, in which case there will be no surcharge. This arrangement is to avoid cluttering up this list with needless "each rates." Of course in the few cases where we do show "each rates" they are net regardless of number.

Grading. Plants that are wider than tall are graded by width.

Packing. At cost as usual, including paper pots if used. Plants will be packed to secure lowest possible freight classification consistent with the nature of the goods shipped. For many years we have given free packing when cash came with order. As things are now we can do this only if cost of packing does not exceed 5%. If it does, we will credit the 5% and charge for balance which can be remitted later.

Shipping. Our responsibility ceases when goods are delivered to transportation company in good order. They travel at buyer's risk. Please state distinctly whether you wish goods shipped by freight, express, or truck line.

Complaints. Must be made within 10 days after buyer receives the goods.

IMPORTANT NOTICE FOR EASTERN NURSERYMEN

Out here everything east of the Rockies is "Eastern"!

During January and February we ship several heated refrigerator cars to Atlantic Coast and mid-western points. Where size of order justifies, we can nearly always arrange for carload service to destination or some nearby point. The total cost of each car is prorated among all customers who have goods in it.

For years we have also safely made l.c.l. spring shipments to any eastern points by using the southern route via New Orleans or St. Louis. This brings the material to customers at proper time and avoids the freezing weather of the northern route. The freight rate is the same. Up to time of going to press, no restriction has been made to prevent this.

Memorandum

from

H. B. CHASE

CHASE, ALABAMA, Feb. 3rd 19 43

W. B. Clarke & Co.,
San Jose, California.

Dear Mr. Clarke:

Att'n: Mr. W. B. Clarke.

Just a word of thanks for the very careful manner in which you packed the little order, invoiced January 3rd. It arrived in perfect condition, and here is your money in full. Please pass a bouquet to your packing department.

Yours very truly,

CHASE NURSERY COMPANY.

Signed: H. B. CHASE

Pres.
